EJX510A and EJX530A Absolute and Gauge Pressure Transmitter

DPharp EJX™

GS 01C25F01-01E

[Style: S2]

The high performance absolute and gauge pressure transmitter EJX510A and EJX530A feature single crystal silicon resonant sensor and are suitable to measure liquid, gas, or steam pressure. EJX510A and EJX530A output a 4 to 20 mA DC signal corresponding to the measured pressure. It also features quick response, remote setup and monitoring via BRAIN or HART communications, diagnostics, and optional status output for pressure high/low alarm. The multi-sensing technology provides the advanced diagnostic function to detect such abnormalities as an impulse line blockage or heat trace breakage. FOUNDATION Fieldbus protocol type is also available.

All EJX series models in their standard configuration, with the exception of the Fieldbus type, are certified by TÜV as complying with SIL 2 for safety requirement.

■ STANDARD SPECIFICATIONS

Refer to GS 01C25T02-01E for Fieldbus communication type marked with “◇.”

□ PERFORMANCE SPECIFICATIONS

Zero-based calibrated span, linear output, wetted parts material code 'S' and silicone oil, unless otherwise mentioned.

For Fieldbus communication type, use calibrated range instead of span in the following specifications.

Specification Conformance

EJX series ensures specification conformance to at least $\pm 3\sigma$.

Reference Accuracy of Calibrated Span

(includes the effects of terminal-based linearity, hysteresis, and repeatability)

Measurement span		A	B	C	D
Reference accuracy	Span ≥ X	±0.1% of Span			
	Span < X	±(0.01+0.009 URL/Span) % of Span			
X		20 kPa (2.9 psi)	0.2 MPa (29 psi)	1 MPa (145 psi)	5 MPa (720 psi)
URL (Upper range limit)		200 kPa (29 psi)	2 MPa (290 psi)	10 MPa (1450 psi)	50 MPa (7200 psi)

T02E.EPS

Ambient Temperature Effects per 28°C (50°F) Change

$\pm (0.15\% \text{ of Span} + 0.15\% \text{ of URL})$

Stability (All normal operating condition)

$\pm 0.1\%$ of URL per 1 year

Power Supply Effects

$\pm 0.005\%$ per Volt (from 21.6 to 32 V DC, 350 Ω)

Vibration Effects

Amplifier housing code 1:

Less than 0.1% of URL when tested per the requirements of IEC60770-1 field or pipeline with high vibration level (10-60 Hz, 0.21 mm peak to peak displacement/60-2000 Hz 3 g)

Amplifier housing code 2:

Less than $\pm 0.1\%$ of URL when tested per the requirements of IEC60770-1 field with general application or pipeline with low vibration level (10-60 Hz 0.15mm peak to peak displacement /60-500 Hz 2g)

Mounting Position Effects

Rotation in diaphragm plane has no effect. Tilting up to 90 degree will cause zero shift up to 0.21 kPa (0.84 inH₂O) which can be corrected by the zero adjustment.

Response Time (All capsules) “◇”

90 msec

When software damping is set to zero and including dead time of 45 msec (nominal)

□ FUNCTIONAL SPECIFICATIONS

Output

Two wire 4 to 20 mA DC output with digital communications, linear or square root programmable. BRAIN or HART FSK protocol are superimposed on the 4 to 20 mA signal.

Output range: 3.6 mA to 21.6 mA

Output limits conforming to NAMUR NE43 can be pre-set by option code C2 or C3.

Failure Alarm (Output signal code D and E)

Output status at CPU failure and hardware error;

Up-scale: 110%, 21.6 mA DC or more (standard)

Down-scale: -5%, 3.2 mA DC or less

Analog output status at process abnormality (Option code /DG6);

The result of process abnormality detected by the advanced diagnostic function can be reflected to an analog alert status. The following three setting modes are available.

		Mode		
		Burnout	Fall back	Off
Standard		110 %, 21.6mA or more	Holds to a specified value within the output range from 3.6mA to 21.6mA	Normal output
Option Code	/C1	-2.5%, 3.6mA or less		
	/C2	-1.25%, 3.8mA or less		
	/C3	103.1%, 20.5mA or more		

T11E.EPS

Damping Time Constant (1st order)

Amplifier's damping time constant is adjustable from 0.00 to 100.00 sec by software and added to response time.

Note: For BRAIN protocol type, when the software damping is set to less than 0.5 sec, communication may occasionally be unavailable during the operation, especially while output changes dynamically. The default setting of damping ensures stable communication.

Update Period “◇”

Pressure: 45 msec

Zero Adjustment Limits

Zero can be fully elevated or suppressed, within the lower and upper range limits of the capsule.

External zero Adjustment

External zero is continuously adjustable with 0.01% incremental resolution of span. Re-range can be done locally using the digital indicator with range-setting switch.

Integral Indicator (LCD display, optional) “◇”

5-digit numerical display, 6-digit unit display and bar graph.

The indicator is configurable to display one or up to three of the following variables periodically; pressure in %, scaled pressure, measured pressure. See also “Factory Settings.”

Burst Pressure

A, B and C capsule : 30 MPa

D capsule : 132 MPa

Self Diagnostics

CPU failure, hardware failure, configuration error, process alarm for pressure or capsule temperature. User-configurable process high/low alarm for

pressure is also available, and its status can be output when optional status output is specified.

Advanced Diagnostics (optional) “◇”

Applicable for Output signal code E and F.

• Impulse line blockage detection

The impulse line condition can be calculated and detected by extracting the fluctuation component from the static pressure signal.

• Heat trace monitoring

The change of the flange temperature calculated by using the two temperature sensors built in the EJX enables to detect the heat trace breakage or the abnormal temperature due to the failure.

Signal Characterizer (Output signal code D and E)

User-configurable 10-segment signal characterizer for 4 to 20 mA output.

Status Output (optional, output signal code D and E)

One transistor contact output (sink type) to output the status of user configurable high/low alarm for pressure.

Rating: 10.5 to 30 V DC, 120 mA DC max.

Note: A check meter cannot be connected when status output option (/AL) is specified.

Refer to 'Wiring Example for Analog Output and Status Output.'

SIL Certification

EJX series transmitters except Fieldbus communication type are certified by TÜV in compliance with the following standards;

IEC 61508: 2000; Part1 to Part 7

Functional Safety of Electrical/electronic/programmable electronic related systems; SIL 2 capability for single transmitter use, SIL 3 capability for dual transmitter use.

The “☆” marks indicates the most typical selection for each specification. Example: EJX530A-DAS4N-012NN/□.

*1: Hastelloy C-276 or ASTM N10276.

*2: Not applicable for combination of capsule code **D** and wetted parts material code **H**.

*3: Not applicable for output signal code **F**.

*4: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids. Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

*5: Not applicable for electrical connection code **0**, **5**, **7** or **9**.

*6: Material of a blind plug is aluminum alloy or 304 SST.

The ‘#’ marks indicate the construction materials conform to NACE material recommendations per MR0175/ISO 15156. Please refer to the latest standards for details. Selected materials also conform to NACE MR0103.

*1: Not applicable with color change option.

*2: Check/External indicator terminals cannot be used when this option code is specified. Not applicable for output signal code F.

*3: The unit of MWP (Max. working pressure) on the name plate of a housing is the same unit as specified by option codes D1, D3, and D4.

*4: Applicable for output signal codes D and E. The hardware error indicates faulty amplifier or capsule.

*5: Also see 'Ordering Information'.

*6: Material traceability certification, per EN 10204 3.1 B.

*7: Applicable for capsule code A.

*8: Applicable for capsule code B.

*9: Applicable for capsule code C.

*10: Applicable for capsule code D.

*11: Pure nitrogen gas or pure water is used for oil-prohibited use (option codes K1 and K2).

*12: The unit on the certificate is always kPa/MPa regardless of selection of option code D1, D3 and D4.

*13: Applicable for wetted parts material code S.

*14: Not applicable for amplifier housing code 2.

*15: Applicable for measurement span code D. If compliance with category III is needed, specify this option code.

*16: 316 or 316L SST. The specification is included in amplifier code 2.

*17: Applicable only for output signal code -E.

*18: The change of pressure fluctuation is monitored and then detects the impulse line blockage. See TI 01C25A31-01E for detailed technical information required for using this function.

< Ordering Information > “◇”

Specify the following when ordering

1. Model, suffix codes, and option codes
2. Calibration range and units
 - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify Lower Range Value (LRV) as greater than Upper Range Value (URV).
 - 2) Specify only one unit from the table, 'Factory Settings' when shipped.
3. Display scale and units (for transmitters equipped with integral indicator only)

Specify either 0 to 100 % or engineering unit scale and 'Range and Unit' for engineering units scale: Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. The unit display consists of 6-digit, therefore, if the specified unit is longer than 7 characters excluding '/', the first 6 characters will be displayed on the unit display.
4. Tag Number (if required)

For BRAIN communication type, specify upto 16 letters. The specified letters will be written in the amplifier memory and engraved on the tag plate. For HART communication type, specify software tag (up to 8 letters) to be written on the amplifier memory and Tag number (up to 16 letters) to be engraved on the tag plate separately.
5. Other factory configurations (if required)

Specifying option code CA or CB will allow further configuration at factory. Following are configurable items and setting range.

[/CA: For HART communication type]

 - 1) Descriptor (up to 16 characters)
 - 2) Message (up to 30 characters)
 - 3) Software damping in second (0.00 to 100.00)

[/CB: For BRAIN communication type]

 - 1) Software damping in second (0.00 to 100.00)
